To Whom It May Concern

California Proposition 65 Compliance

California's Proposition 65 entitles California consumers to special warnings for products that contain chemicals known to the state of California to cause cancer and birth defects or other reproduction harm if those products expose consumers to such chemicals above certain threshold levels.

This document certifies that to the best of our current knowledge and belief and under normal usage, all Zymbit products are in compliance with California Proposition 65. Although some of our products use semiconductors and other electronic components that contain lead internally, there is no risk of exposure, such as contact with food/drink or inhalation. Zymbit products contain No Significant Risk Levels for cancer-causing chemicals and are below the Maximum Allowable Dose Levels (MADL) for chemicals causing reproductive toxicity. Therefore, a warning label that our products contain compounds that may cause cancer, birth defects, or reproductive harm is not required

Disposal and deconstructive decomposition.

Products at the end of their life, as well as any scrap, must be disposed following all local and national legal regulating provisions that apply to electronic products. Any destructive decomposition of our products may result in the release of trace amounts of lead (Pb), Arsenic (As), Beryllium (Be), Nickel (Ni) contained with semiconductor components used in our products.

This certificate of compliance is based upon information and documents of conformance supplied by component vendors and assembly subcontractors to Zymbit and to the best of our knowledge is accurate as of the date of this certification.

Philip Strong

CEO, Zymbit
